

## **E Commerce Task Force Recommendations**

- I do favor alcohol delivery
- Delivery eligibility should include all the requirements now required for alcohol purchase in person with electronic verification of age and identification
- ATC should develop a separate permit (license) for alcohol delivery
- ATC should enforce eligibility requirements, permit compliance and sting operations replicating current procedures for traditional vendors
- Restrictions for delivery to certain locations should be considered
- I do not see a delivery radius being an important factor in proposed legislation.
- The legislation should require the same training requirements for anyone delivering alcohol as required by those selling alcohol to individuals in person. The training could be more extensive based on the electronic capture of age and identification requirements.
